104 multiple choice question(s) added.

1. The disadvantage of the closed-loop mode is that the actual value of the controlled variable is not taken into account. If disturbances cause this controlled variable to deviate from the setpoint, no countermeasure is taken to correct for the deviations

a) True
b) False
c) Carl Say
d)

Answer: Option b

2. The main objective of a process control is

a) to control physical parameters
b) to control mechanical parameters
c) to control optical parameters
d) to control electrical parameters

Answer: Option a

Explanation:
A process control is mainly used in order to control the physical parameters including temperature, pressure, flow rate, force, etc.

3. What is a process control system?

a) system to keep the parameters at zero value
b) system to maintain the parameters constant
c) system to keep the parameters at highest value
d) system to check the voltage

Answer: Option b
